%-----SUMMARY-----

Summary

Data Engineer with experience building operational reporting pipelines, API-based integrations, and warehouse-ready datasets across AWS and Azure. Strong background in SQL, Python, data modeling, and analytics enablement for project performance reporting, operational KPIs, and cross-functional decision support.

Technical Skills

Programming Languages: SQL, Spark SQL, Python (PySpark, Pandas, NumPy), Scala \\
Cloud Platforms: Azure, AWS \\
AWS Services: Redshift, S3, Glue, Lambda, EMR, EC2, CloudWatch, Step Functions, CloudFormation, EventBridge \\
Azure Services: Azure SQL Database, Azure Data Lake Storage, Azure Monitor, Azure DevOps, Data Factory, Databricks, Synapse Analytics, ADLS \\
Data Processing & Streaming: Apache Spark (PySpark, Spark SQL, Spark Structured Streaming), Kafka, Hadoop, Hive, Kafka Streams \\
Data Orchestration: Azure Data Factory, AWS Step Functions, Azure Synapse Pipelines, Apache Airflow, Databricks Workflows \\
Data Warehousing: Snowflake, Azure Synapse Analytics, Amazon Redshift, Query Optimization, Star Schema Design, Columnar Indexing \\
Databases: PostgreSQL, MySQL, SQL Server, Azure SQL Database, Data Modeling, MongoDB, Cassandra \\
Infrastructure & DevOps: Docker, Terraform, CloudFormation, CI/CD (GitHub Actions, Bitbucket, Bamboo), Version Control (Git, GitHub, Bitbucket) \\
Data Quality & Monitoring: Azure Monitor, CloudWatch, Data Validation Frameworks, Schema Validation, Slack Integration \\
BI & Analytics Tools: Power BI, Tableau \\
vspace\ -0.5em\ \\
Professional Experience

- Architected 5 ELT pipelines (800GB+/day) using Azure Data Factory & Databricks, improving data lake availability to 99.15% (reducing annual downtime from 68 hours to 7.5 hours).

- Optimized 18 analytical queries by architecting star schema (8 facts, 12 dimensions) in Azure Synapse with advanced indexing & partitioning, reducing latency 33% (950ms to 640ms) and supporting 50+ concurrent users.

- Built 3 Spark Structured Streaming pipelines ingesting 150K events/second from Kafka, achieving <8 second latency and enabling real-time dashboards for 25+ business analysts.

- Accelerated data deployment 7.5x (2x/month to 3x/week) by architecting CI/CD pipeline with Docker, Terraform, & Bamboo for 15+ jobs, reducing failed deployments from 28% to 4% and MTTR from 35 to 8 minutes.

AWS Data Engineer '21 - July'23 \

Chakravuyha Software Technologies, Hyderabad, India \[-0.5pt]

% Reduce space between title and bullet points

[leftmargin=1.5em, itemsep=-0.3em, topsep=0em]

- Designed 3-tier S3 data lake (4TB/month) reducing query latency 28% (95s \$\$ 68s) and compressing data 72% (3TB \$\$ 850GB) while serving 35+ daily queries across 12 dashboards.
- Built Python API ingestion framework with exponential backoff logic, reducing API failures 91% (320/month \$\$ 28/month) and cutting integration setup from 5 weeks to 2 weeks.
- Orchestrated 22 Airflow DAGs reducing batch runtime 35% (240min \$\$ 155min) while maintaining 99.2% uptime and <150ms response latency for production queries.
- Implemented data quality framework with 31 automated tests across 22 pipeline stages, preventing 89 pre-warehouse issues annually and reducing production incidents 62% (8/month \$\$ 3/month).

% ??? EDUCATION ???

Missouri University of Science and Technology, Rolla, MO Aug'23 - May'25 \

Master of Science, Information Science and Technology \
